

Real-time systems are those systems that respond to external events with respect to timing constraints

Real-time programs must guarantee response within specified time constraints (deadline)

4

Real-time operating system (RTOS) is a library that schedules execution in a timely manner

May 5th, 2017

5

Scheduler determines which task runs by following a scheduling policy

Preemptive priority-based scheduling

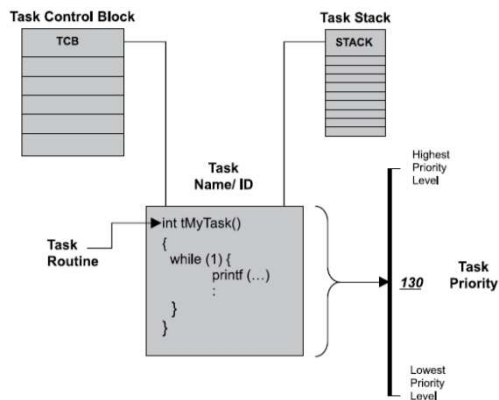

Round-robin scheduling

May 5th, 2017

vsupacha@engr.tu.ac.th 6

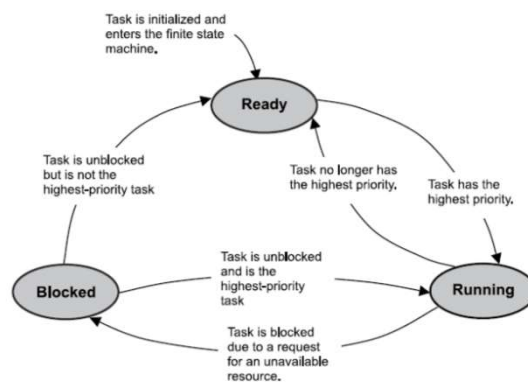

Task is an independent thread of execution that can compete with other concurrent tasks for processor execution time

May 5th, 2017

vsupacha@engr.tu.ac.th 7

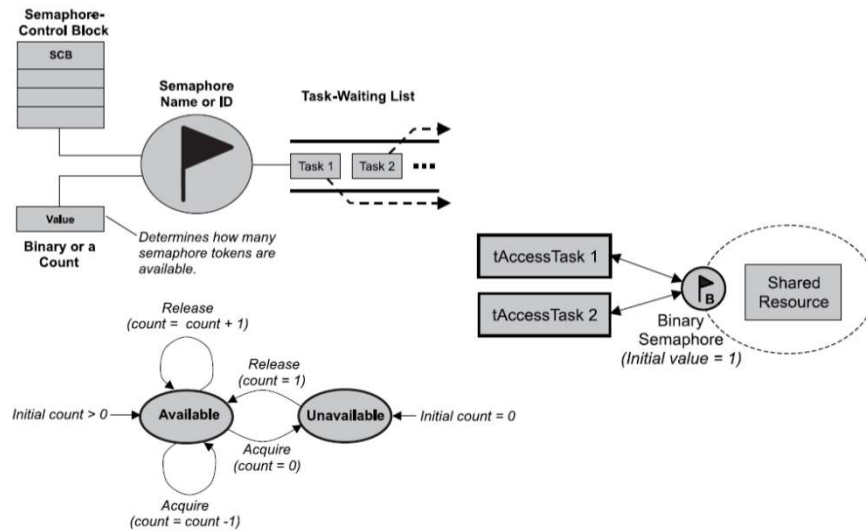

At any time, each task exists in one of task states, including ready, running, or blocked

May 5th, 2017

vsupacha@engr.tu.ac.th 8

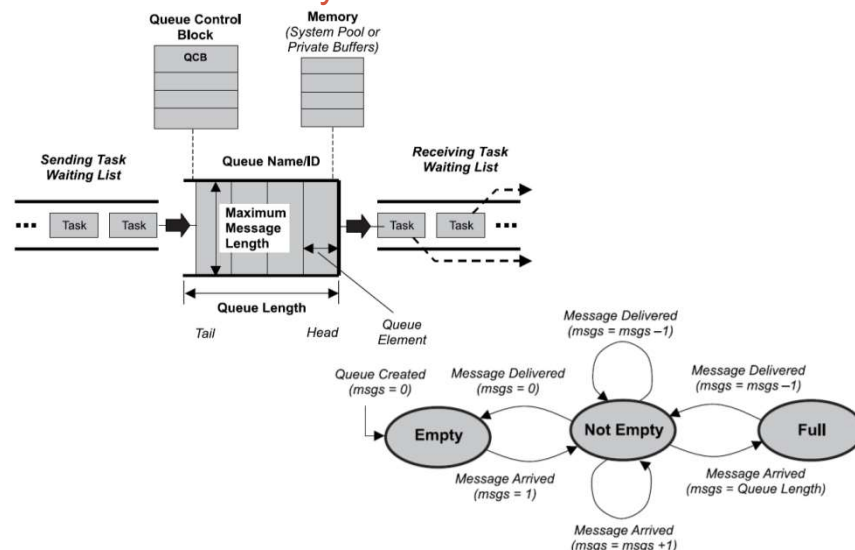

Semaphore is like a key that allows a task to carry out some operation or to access a resource

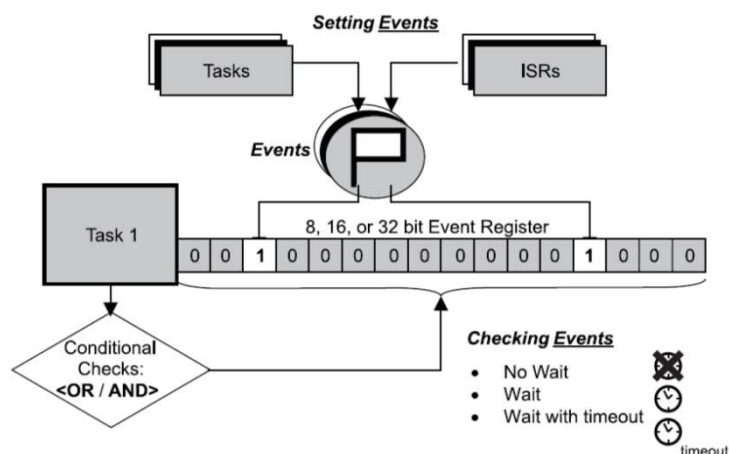

May 5th, 2017

vsupacha@engr.tu.ac.th 9

Message queue is a buffer-like object through which tasks and ISRs send and receive messages to communicate and synchronize with data.

Event register consists of a group of binary event flags used to track the occurrence of specific events

Preparation

1. Add file X.ino with `setupX()` and `loopX()`
2. Add file X.h

```
#ifndef X_H
#define X_H

#endif
```

3. Include RTOS library

```
#include <Energia.h>
#include <xdc/runtime/Error.h>
#include <ti/sysbios/BIOS.h>
#include <ti/sysbios/knl/Event.h>
```

RTOS template

1. Main setup = HW/RTOS initialization

```
void setup() {
    hardwareInit(); // Serial, button, ...
    rtosInit();      // RTOS object
}
```

2. Main loop = event dispatch

```
void loop() {
    if (Serial.available()) {
        Event_post(evtHandle, EVT_SERIAL);
    }
    delay(100);
}
```

```
#define EVT_SERIAL Event_Id_00
```

RTOS template

1. Feature setup

```
void setupX() {
    xInit(); //
}
```

2. Feature loop

```
void loopX() {
    Event_pend(evtHandle, EVT_NONE, EVT_SERIAL,
    BIOS_WAIT_FOREVER);
    do {
        uint8_t ch = Serial.read();
        ...
    } while(Serial.available());
}
```
